

## IN THE CLAIMS

## Listing of claims:

1-14. (Cancelled)

15. (Currently amended) ~~The combination of claim 11 and further comprising:~~The combination comprising:

a blending and dispensing assembly having an inlet end and a discharge end and a passageway communicating from said inlet end to said discharge end, said inlet end being configured to fit and seal against a base product delivery end outlet of a flowable mixture dispenser head, said assembly having a blending chamber in the passageway;

a manifold on said assembly with multiple passageways in the manifold for delivery of fluid ingredients in a first direction from outside said assembly into said chamber;

an auger in said blending chamber and operable, when actuated, to move a mixture from said blending chamber to an outlet at said discharge end;

a blender motor coupled to said auger to actuate said auger;

a plurality of ingredient sources;

a plurality of ingredient conduits coupled to said manifold and to said sources to convey ingredients from said sources to said manifold;

a plurality of pumps coupled to said sources and operable, when actuated, to pump ingredients from said sources to said manifold;

a controller coupled to said pumps to signal said pumps for operation;

a selector coupled to said controller to enable said controller to initiate operation of selected pumps;

a base material dispenser having a dispenser head with a base product delivery end outlet coupled to said inlet end of said assembly and having a member operable, when actuated, to initiate flow of base product out of the delivery end outlet of the dispenser into the inlet end of the assembly; and

a switch coupled to said member and to said selector to signal said controller to initiate operation of said selected pumps.

16. (Original) The combination of claim 15 and wherein:

said member is a base product draw handle and said switch is operable by said handle.

17-20. (Cancelled)

21. (Currently amended) ~~The combination of claim 17 and further comprising:~~

The combination comprising:

a blending and dispensing assembly having an inlet end and a discharge end and a passageway communicating from said inlet end to said discharge end, said inlet end being configured to fit and seal against the base product delivery end outlet of a flowable mix dispenser head, said assembly having a blending chamber in the passageway;

a plurality of ingredient sources storing different ingredients for addition to a base product in a direction from outside said assembly into said chamber;

an auger in said blending chamber and operable, when actuated, to move a mixture from said blending chamber to an outlet at said discharge end;

a blender motor coupled to said auger to actuate said auger;

a plurality of containers holding said ingredient sources;

a plurality of ingredient movers coupled to said sources and operable, when actuated, to move said ingredients from said sources toward said chamber.

a controller coupled to said ingredient movers to signal said movers for operation to move said ingredients toward said chamber;

a selector coupled to said controller to enable said controller to initiate operation of selected movers;

a base material dispenser having a base material delivery end outlet coupled to said inlet end of said assembly and having a member operable, when actuated, to initiate flow of base material out of the delivery end outlet of the dispenser into the inlet end of the assembly; and

a switch coupled to said member and to said selector to signal said controller to initiate operation of said selected ingredient movers.

22. (Previously presented) The combination of claim 21 and wherein:  
said member is a base material draw handle and said switch is operable by said draw handle.
